What is still needed - 6 works, 6 claims

Every title on this page was read from a record - no row says "title not asserted" any more. What is left is **six works, one claim each**, each carrying a single attribution sentence. Three are print-only and three can be got by DOI or ISBN; the grey line under each title says which.

Two warnings that save a wasted order. (1) The Nowacki citation mixes two books: the Pergamon *Thermoelasticity* is 1962 or 1986, and the Nowacki book of **1975** is *Dynamic Problems of Thermoelasticity* (Noordhoff) - a different title. Decide which one the sentence means before ordering. (2) The Carlson chapter is dated **1973** by Crossref, not 1972, so the year in the citation is out by one.

#	Author(s) and year, then the title	What it unblocks	DOI	ok
SEND THESE FIRST - 3 WORKS, ONE SENTENCE EACH AND ONE SHARED SENTENCE				
1	**Cattaneo 1948** *Sulla conduzione del calore* English: On the Conduction of Heat no DOI for the 1948 printing; a 2011 reprint chapter exists (10.1007/978-3-642-11051-1_5)	The note the manuscript calls the conceptual starting point: the relaxation term that makes the heat equation hyperbolic.	*none*	-
2	**Nowacki 1975** *Thermoelasticity* 1986 second edition, ISBN 978-0-08-024767-0, or its chapters by DOI	Variational formulations and reciprocity theorems. Two batches have now failed to fill this row.	*none*	-
3	**Carlson 1972** *Linear Thermoelasticity* chapter record in Crossref - the pages are 297-345	The other half of the same sentence: classical variational formulations and reciprocity theorems.	10.1007/978-3-662-39776-3_2	yes
OLD ATTRIBUTION NOTES - 3 WORKS, ONE SENTENCE EACH				
4	**Danilovskaya 1950** *Thermal stresses in an elastic half-space due to a sudden heating of its boundary* English line is the title itself - the original is Russian print only, Prikl. Mat. Mekh. 14, 316-318	Attribution of the classical thermal-shock problem.	*none*	-
5	**Vernotte 1958** *Les paradoxes de la théorie continue de l'équation de la chaleur* English: The paradoxes of the continuous theory of the heat equation print only, C. R. Acad. Sci. Paris 246, 3154-3155	The independent relaxation-term note, cited alongside Cattaneo.	*none*	-
6	**Born and von Karman 1912** *Über Schwingungen in Raumgittern* English: On vibrations in space lattices print only, Phys. Z. 13, 297-309	The exact chain dispersion relation omega = 2 sqrt(kappa_s/m) times abs(sin(ka/2)).	*none*	-

Replacement copy, outside the list: Polizzotto (2001), Int. J. Solids Struct. 38 - the held copy has no extractable text, so a text-based PDF closes CR195.

Not requested, only noted: CR127, CR152, CR166 and CR196 are recorded as held but no readable copy can be found; they need nothing from you, and a clean copy would close four claims for free.

Orderable without a PDF: sixteen of the nineteen register-level works can be ordered straight from a DOI that has been checked; the other three are already held. That list lives in the repository, not here.

Where the titles come from. Cattaneo and Carlson were read off their Crossref records (Cattaneo from the 2011 reprint chapter). Nowacki, Vernotte, Danilovskaya and Born-von Karman were read off independent records that print the title, because no publisher record exists for those printings; the Danilovskaya original is Russian, so the English line is the title the citing literature prints, not a translation made here.
