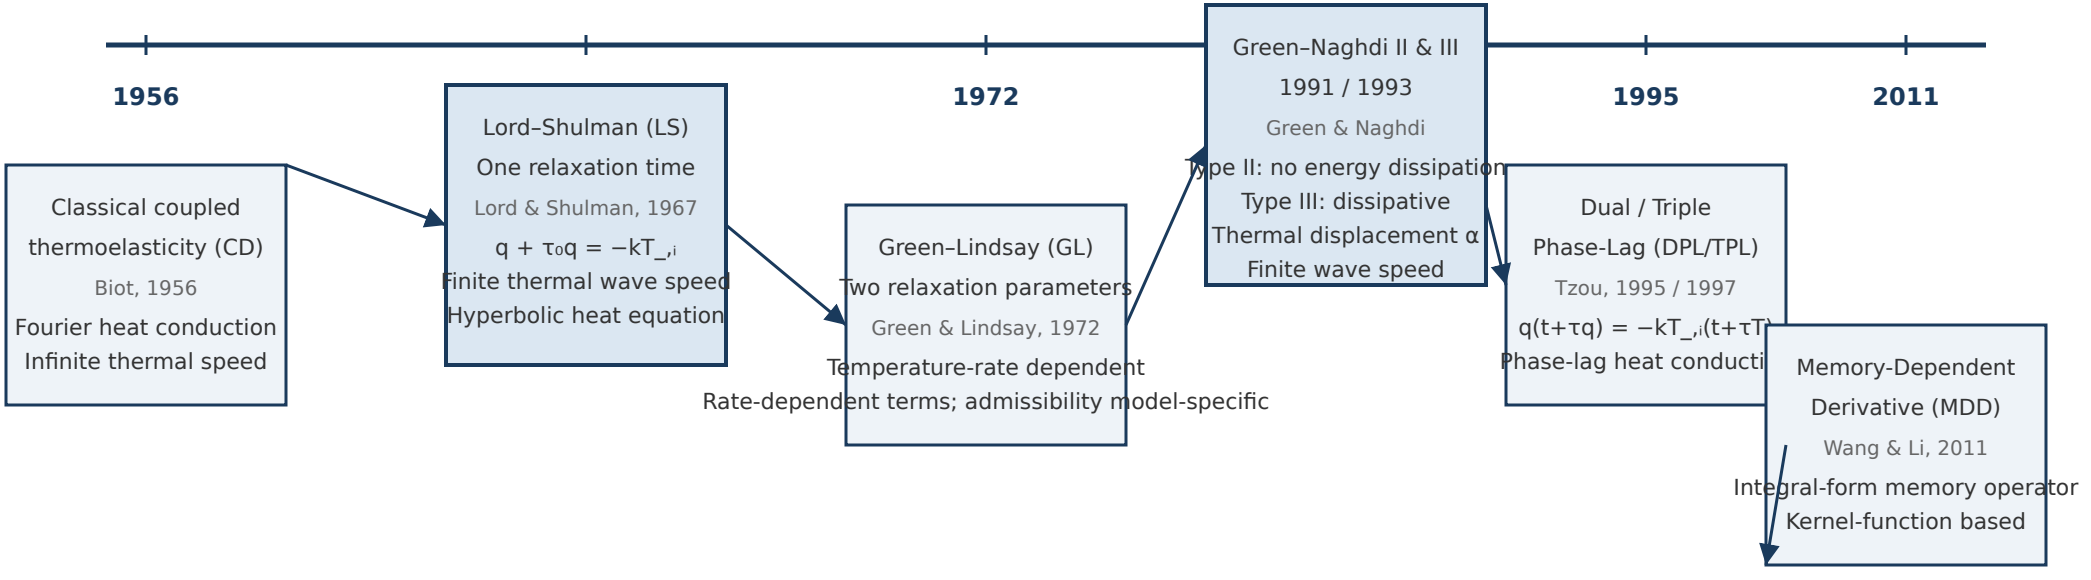
Historical evolution of generalized continuum wave theories

Documented development of classical and generalized thermoelastic theories with primary sources



Key:

- ■ Primary theory (new family)
- ■ Key development

Source status:

Dates from cited publications; equations not independently checked

DOI metadata does not verify equations

Note: Timeline shows documented publication dates. Theory relationships represent historical development, not mathematical equivalence. Energy flux formulations for LS, DPL, TPL, MGT, MDD remain open derivations (see Section 10.3).
