What is still needed - 6 works, 6 claims

The four books did their job. Tzou (CR002, CR112), Podlubny (CR039) and Boley and Weiner (CR169) are read and closed. What is left is **six works, one claim each**, and every one of them carries a single attribution sentence. Four papers were waived on your word and are off the list - the sentences that cite them have to go.

Two things to know before you send anything else. The fifth book, a *Thermoelasticity*, is **Parkus**, not Nowacki - so the Nowacki row is still open, and it is the one row that has now defeated two batches. And two of the four books carry a caveat that travels with the evidence: the Tzou copy is the 2015 second edition (the manuscript cites 1997), and the Boley and Weiner copy is a reflowable EPUB, so its quotes are cited by chapter rather than by page.

#	Author(s) and year, then the title	What it unblocks	DOI	ok
SEND THESE FIRST - 3 WORKS, ONE SENTENCE EACH AND ONE SHARED SENTENCE				
1	**Cattaneo 1948** *Sulla conduzione del calore* EN: *On the Conduction of Heat* translation of the printed Italian title	The note the manuscript calls the conceptual starting point: the relaxation term that makes the heat equation hyperbolic.	*none*	-
2	**Nowacki 1975** *Thermoelasticity*	Variational formulations and reciprocity theorems. Two batches have now failed to fill this row - a two-page note in the fourth, and Parkus's book instead of Nowacki in the fifth.	*none*	-
3	**Carlson 1972** *Linear thermoelasticity*	The other half of the same sentence: classical variational formulations and reciprocity theorems.	*none*	-
OLD ATTRIBUTION NOTES - 3 WORKS, ONE SENTENCE EACH				
4	**Danilovskaya 1950** *title not asserted* EN: *Thermal stresses in an elastic half-space arising after a sudden heating of its boundary* customary rendering, not verified	Attribution of the classical thermal-shock problem.	*none*	-
5	**Vernotte 1958** *title not asserted* EN: *The paradoxes of the continuous theory of the heat equation* customary rendering, not verified - two 1958 notes exist	The independent relaxation-term note, cited alongside Cattaneo.	*none*	-
6	**Born and von Karman 1912** *title not asserted* EN: *On vibrations in space lattices* customary rendering of the German title, not verified	The exact chain dispersion relation omega = 2 sqrt(kappa_s/m) |sin(ka/2)|.	*none*	-

Replacement copy, outside the list: Polizzotto (2001), Int. J. Solids Struct. 38 - the held copy has no extractable text, so a text-based PDF closes CR195.

Not requested, only noted: CR127, CR152, CR166 and CR196 are recorded as held but no readable copy can be found; they need nothing from you, and a clean copy would close four claims for free.

Orderable without a PDF: sixteen of the nineteen register-level works can be ordered straight from a DOI that has been checked; the other three are already held. That list lives in the repository, not here.

DOIs and titles. "none" means no DOI exists for that printing - a book or a pre-DOI note - so the journal, volume and pages are what a library order needs. Rank 1 carries a translation of its Italian title. Ranks 4-6 have no title in any record found and none in the register, so their English lines are customary renderings, marked "not verified": usable for an order, not to be quoted.
