Application claims: evidence review still required

No ranking of maturity or validation strength is asserted in this revision.

Wave and sensing applications

- Nondestructive evaluation
- Geophysics and seismology
- Biomedical / photoacoustic methods

Devices and materials applications

- Smart structures and energy harvesting
- Semiconductor and nanoscale devices
- Porous, graded, and structured media

For each application, verify before assigning an evidence level

1. Is the claim theoretical, numerical, experimentally measured, or independently replicated?
2. Are materials, parameters, boundary conditions, and uncertainty reported?
3. Is the application result checked against observations not used for calibration?

This is an audit checklist, not a substitute for reading the cited primary studies.
