

(a) circular cavity

wall:  $\theta = p(t)$ , traction-free  
outer boundary  $R = 80a$ :  $\theta = 0$ ,  $u = 0$

(b) equal-area ellipse,  $\chi = 2$

wall:  $\theta = p(t)$ , traction-free  
outer boundary  $R = 80a$ :  $\theta = 0$ ,  $u = 0$

(c) wall pulse, quiescent initial state
