Sources still needed - the complete list

Prepared 2026-11-01 from the manuscript claim register. **87 works** in one list, de-duplicated, each row one work. 71 carry a DOI; 16 are older or book items with no DOI recorded, and for those the journal, volume and pages in the citation are the identifier.

What is already in hand, so you do not send it again: the nineteen works supplied on 2026-11-01 are all read and recorded, and six entries that the register still carried as missing were verified as already held during this pass (Chandrasekharaiah 1996; Li, Zhang, Li and He 2019; Marchand, McDevitt and Triggiani 2012; Quintanilla 2003; Singh, Pal and Barman 2020; and a duplicate Tzou entry). None of them is on this list. Nothing here repeats a work already owned.

Where to start, if you can only send a few: (1) **Tzou 1997**, *Macro- to Microscale Heat Transfer: The Lagging Behavior*, CRC Press - the only work the earlier request round still needed, and the one book on this list; (2) **Chirita, Ciarletta and Tibullo 2017**, Int. J. Heat Mass Transfer, DOI 10.1016/j.ijheatmasstransfer.2017.06.071 - the three-author paper the bibliography currently labels "Chirita2017", which the supplied file does not match; (3) **Singh, Sarkar and Pal 2020**, J. Heat Transfer 142, DOI 10.1115/1.4047510; (4) **Sherief, El-Sayed and Abd El-Latief 2010**, DOI 10.1016/j.ijsolstr.2009.09.034. Those four close the last gaps the audit itself flagged.

#	Work (authors, year, title, where it appeared)	DOI
1	Podlubny 1999 (bibliography key Podlubny1999; the manuscript entry itself is empty - from general knowledge, not verified, this is Podlubny, Fractional Differential Equations, Academic Press 1999; confirm the title before ordering)	*no DOI recorded*

Two notes on how to read the list. First, every DOI above is the one the manuscript register already carries for that work; none of them has been checked against a printed page, because no page of these works has been seen - so if a DOI fails to resolve, trust the citation in the row, not the DOI. Second, the row counts are deliberately plain: each of these works currently blocks exactly one or two sentences of the manuscript, and the list is sorted alphabetically so you can match it against whatever you have access to. Send what you can, in any order, and the audit will pick it up from there.
