Books wanted: what would strengthen the paper, and what would not

2026-11-01, step 34 | every record verified against Crossref today. Full table with DOIs, ISBNs, verification notes and reading guidance: one-click CSV

First the finding that matters more than any list: no book is blocking a claim. Of the 111 claims at SOURCE NOT AVAILABLE, 109 are already covered by a claim-level file; the two left are CR181 (now carried at one remove by Born and Huang 1954) and CR144 (a journal paper). Everything below is about strength, not about unblocking.

tier	#	book	DOI / ISBN	what it buys
A	1	**Electrodynamics of Continua I: Foundations and Solid Media** Eringen, A. C. and Maugin, G. A., Springer New York	10.1007/978-1-4612-3226-1 ISBN 9781461279235	the coupled electro-magneto-elastic constitutive theory the repository has never had; it is what BK-15 needs to stop being a refusal and become an executable invariant
A	2	**Poromechanics** Coussy, O., Wiley	10.1002/0470092718 ISBN 9780470849200	a real porous constitutive model (Biot/Coussy), so BK-11 stops being algebra about field counting and becomes a model a porous paper can actually be measured against
B	3	**Mittag-Leffler Functions, Related Topics and Applications** Gorenflo, R., Kilbas, A. A., Mainardi, F. and Rogosin, S. V., Springer Berlin Heidelberg	10.1007/978-3-662-43930-2 ISBN 9783662439296	the asymptotic chapters that carry the power-law / heavy-tail statement for alpha < 1: the one gap in CR046 that the front matter alone could not close
B	4	**Fractional Thermoelasticity** Povstenko, Y., Springer International Publishing	10.1007/978-3-319-15335-3 ISBN 9783319153346	the book-level statement of the paper's own core model - fractional heat conduction coupled to thermoelasticity - with the fundamental solutions the manuscript uses
B	5	**Thermal Stresses - Advanced Theory and Applications** Hetnarski, R. B. and Eslami, M. R., Springer International Publishing	10.1007/978-3-030-10436-8 ISBN 9783030104351	canonical, textbook-level statements of Lord-Shulman, Green-Lindsay, Green-Naghdi and dual-phase-lag side by side - the safest place to check a sentence that names a theory
B	6	**Rational Extended Thermodynamics** Muller, I. and Ruggeri, T., Springer New York	10.1007/978-1-4612-2210-1 ISBN 9781461222101	the hierarchical closure argument the manuscript uses for its wave hierarchies, at book length
B	7	**Extended Irreversible Thermodynamics** Jou, D., Casas-Vazquez, J. and Lebon, G., Springer Netherlands	10.1007/978-90-481-3074-0 ISBN 9789048130733	the extended-irreversible-thermodynamics framing that several sentences rely on, in the edition the bibliography names
B	8	**Fractional Calculus and Waves in Linear Viscoelasticity** Mainardi, F., Imperial College Press	10.1142/p614 ISBN 9781848163294	the Mittag-Leffler asymptotics AND the viscoelastic wave hierarchy in one book, which is where several fractional and memory-type sentences actually come from
B	9	**Nonlocal Continuum Field Theories** Eringen, A. C., Springer New York	10.1007/b97697 ISBN 9780387952758	the differential form (1 - xi^2 laplacian) sigma = C : eps that CR182 attributes jointly to three Eringen works
B	10	**Microcontinuum Field Theories I: Foundations and Solids** Eringen, A. C., Springer New York	10.1007/978-1-4612-0555-5 ISBN 9781461268154	the micropolar and couple-stress constitutive theory at book length - the theory the piezo/micropolar sentences name
C	11	**Waves in Layered Media** Brekhovskikh, L. M., Academic Press (Elsevier)	10.1016/b978-0-12-130560-4.x5001-6 ISBN 9780121305604	the classical layered-medium treatment of Love and interface waves: an independent place to anchor BK-13 and BK-14, so their checks rest on a book as well as on the closed forms
C	12	**Wave Propagation in Elastic Solids** Achenbach, J. D., North-Holland (Elsevier)	10.1016/C2013-0-04485-4 ISBN 9780720403251	the classical Rayleigh, Lamb and interface treatment, and a citable modern standard for the three R0 bibliography rows that currently name older printings
C	13	**Elastic Waves in Layered Media** Ewing, W. M., Jardetzky, W. S. and Press, F., McGraw-Hill	no DOI recorded	the historical layered-media treatise (Love waves, dispersion) - useful only if a 1957 printing is at hand; rank 11 does the same job with a verified DOI

If only three can be sent: 1. Eringen and Maugin (1990) - the only one that closes the atlas (BK-15, six multifield cases, coverage 34/40 to 40/40); 2. Coussy (2004) - turns the thinnest benchmark, BK-11, from field-counting into a model check; 3. Gorenflo, Kilbas, Mainardi and Rogosin (2014) - closes the one mandatory gap that cannot be closed in-house: the alpha < 1 asymptotic tail for CR046.

Already held, please do not resend: Ignaczak and Ostoja-Starzewski (2010), Tzou (2nd ed.), Boley and Weiner, Podlubny, Carlson (handbook chapter), Sneddon (1972), Yang (2018), Born and Huang (1954). Rejected as unusable earlier: Grigull and Sandner, and the one-page Cattaneo extract. The top-20 list also still carries Tzou (1997, first edition) - only needed for a specific 1997 page.
