What is still needed - 13 works, in the order that helps most

14 blocked claims hang on these 13 works. Ranks 1-5 carry the model, the definition and the two standard references - send these first. Ranks 6-9 are papers whose DOI resolves, so a download takes a click. Ranks 10-13 each carry a single attribution sentence and can wait. 4 works carry a verified DOI; the rest are books and pre-DOI notes, for which the journal, volume and pages are what a library needs.

Three of these are already on the way to being solved. CR003 and CR114 turn out to be the same paper and it is already held and read; Yang (2018) is held and now readable; and the nineteen register-level rows have their own pass - sixteen of them can be ordered directly, five need a catalogue lookup first. None of that is on this page. What is on this page is exactly what no copy in hand can close.

#	Author(s) and year, then the title	What it unblocks	DOI	ok
SEND THESE FIRST - 5 WORKS, 6 CLAIMS				
1	**Tzou, D. Y.** *Macro- to microscale heat transfer: the lagging behavior*	Blocks **two claims** (CR002, CR112): the dual-phase-lag model itself - heat flux at t+tau_q driven by the gradient at t+tau_T.	*none*	-
2	**Cattaneo 1948** *Sulla conduzione del calore*	The note the manuscript calls the conceptual starting point: the relaxation term that makes the heat equation hyperbolic.	*none*	-
3	**Podlubny 1999** *Fractional differential equations*	The definition equation for the Caputo derivative (order alpha between m-1 and m) that every fractional model rests on.	*none*	-
4	**Nowacki 1975** *Thermoelasticity*	Variational formulations and reciprocity theorems; also the row the fourth batch failed to fill.	*none*	-
5	**Boley and Weiner 1960** *Theory of thermal stresses*	Thermal-shock solutions quoted as the standard test in the texts.	*none*	-
ONE CLICK EACH - 4 PAPERS WITH A WORKING DOI				
6	**Singh, Sarkar and Pal 2020** *Temperature-rate-dependent thermoelasticity theory with memory-dependent derivative: energy, uniqueness theorems, and variational principle*	Temperature-rate-dependent theory with memory-dependent derivative - energy, uniqueness, variational principle.	10.1115/1.4047510	yes
7	**Kumar and Tomar 2024** *Rayleigh-type waves in nonlocal micropolar thermoelastic half-space containing void pores*	Rayleigh-type waves in a nonlocal micropolar half-space with voids - the closest work to the manuscript's own subject.	10.1007/s10659-024-10079-4	yes
8	**Kumar, Gupta, Pathania and Barak 2025** *Response of memory to the imperfect fluid-double porous non-local thermoelastic solid interface*	Energy ratios at an imperfect fluid / double-porous nonlocal interface.	10.47974/JIOS-1608	yes
9	**Wang, J.-L. and Li, H.-F.** *Memory-dependent derivative versus fractional derivative (IV): space-dependent derivative for unsteady heat diffusion*	Memory-dependent versus fractional derivative, part IV - the comparison the manuscript leans on.	10.3390/fractalfract9120794	yes
OLD ATTRIBUTION NOTES - 4 WORKS, ONE SENTENCE EACH				
10	**Carlson 1972** *Linear thermoelasticity*	Classical variational formulations and reciprocity theorems.	*none*	-
11	**Danilovskaya 1950** *title not asserted*	Attribution of the classical thermal-shock problem.	*none*	-
12	**Vernotte 1958** *title not asserted*	Independent relaxation-term note, cited alongside Cattaneo.	*none*	-
13	**Born and von Karman 1912** *title not asserted*	The exact chain dispersion relation omega = 2 sqrt(kappa_s/m) |sin(ka/2)|.	*none*	-

One replacement copy, outside the list: Polizzotto (2001), Int. J. Solids Struct. 38 - the copy already held has no extractable text, so a text-based PDF would close CR195.

Not requested, only noted: four works (CR127 Muller and Ruggeri; CR152 Gurtin and Williams 1966; CR166 Li et al. 2019; CR196 Eringen 1974) are recorded as held, but no readable copy can be located by name. They are not on this list and need nothing; if a clean copy happens to be at hand it would close four claims for free.

How the DOIs were checked. Every DOI printed here was queried against the Crossref REST API and returned the work named in the citation line; "ok" is that answer. Where no DOI is printed, none exists for that printing of the work - a book or a pre-DOI note - and the journal, volume and pages in the citation line are what a library order needs. No title is asserted for a row that says so: the register holds no title for it and none was found in a record.
